

Steven Wright

Steven is a 67 year old man that lives with his wife, Martha, and two dogs. He and Martha have two grown kids that do not live around the area, one attending a state college and another living with a family of their own. Steven suffers from a severe form of osteoarthritis in the knees. He says the pain is debilitating and sometimes immobilizes him. Earlier today, Steve fell down the stairs and worries that he may have caused further serious damage to his knees. He called his wife and she has brought him to the emergency room.

Martha Wright

Martha's husband Steven, recently fell down the stairs. While she loves him very much, taking care of his needs can get tiresome, especially with all the hospital trips. Martha finds herself in a position where she wants her husband to be ok, but needs time to do other things as well.

MediMate makes this possible. Martha can check up on her husband anytime she likes, freeing her up to rest and catch up on things.

Bradley Wright

Bradley is the son of Steven and Martha. In addition to his father's health problems, his two year old son was recently hospitalized with pneumonia. As any caring parent would. Him and his wife stayed by their son's side, and alternated between who would visit Steven, and who would stay with the baby. They also have a six year old, who they had to get a nanny for.

With MediMate, the couple could effectively split their time between home and the hospital. MediMate would allow for them to take care of both kids and Bradley's father, Steven.

Laura Jackson

Laura has been a hospital doctor for the past 13 years. While she loves her job, she has come to realize that the level of reporting on patient statistics is often lagging behind what is happening real time. She needs her numbers on the dot and needs an easy way to visualize them with trigger warnings specific to each patient.

MediMate can provide that throughout the patient's stay.

Jessica Miller

Jessica is a Nurse at Mary Washington Hospital. After graduating from nursing school she got her dream job, working with some of the best people in medicine. Although her job is rewarding, it can be overwhelmingly stressful at times. Without having an easy system in place that monitors all the patient's vitals and displays them in real-time, keeping an eye on all her patients is a tremendous task.
